

CASE STUDY - KERRY FOOD

Kerry Foods is the leading consumer foods processor and supplier in Europe.

THE CHALLENGE

Food manufacturing sites have strict protocols to avoid contamination and to meet all regulations in the industry. Any issues with industrial doors can directly impact compliance with these regulations. This site had several competitor products that needed to be serviced and replaced.

THE SUCCESS

We have installed 20 doors on this site and provide maintenance and service to over 30 doors, including competitor products. The site has a range of doors to suit varying requirements, including internal Speedor Cleanroom and Mini doors, external Speedor Storms and fire shutters.

THE SOLUTION

Using our experience and knowledge we spent time surveying all of the doors on the site and advising which doors needed to be replaced, repaired and serviced to ensure they were compliant with all regulations. Due to the volume of doors in the facility, we had a weekly presence on site until all issues were eradicated.

SECTOR: FOOD

PROJECT

Manufactured 20 doors including Speedor Storm, Speedor Mini, Speedor Cleanroom Service over 30 doors

CHALLENGES

CONTAMINATION

Threat of contamination from unreliable doors

RELIABILITY

Downtime from unreliable doors affecting production

ADVANCED SPECIFICATION

Knowledge and understanding of specialist production areas and legislations
